

Oracle Cloud Infrastructure Database Migrations

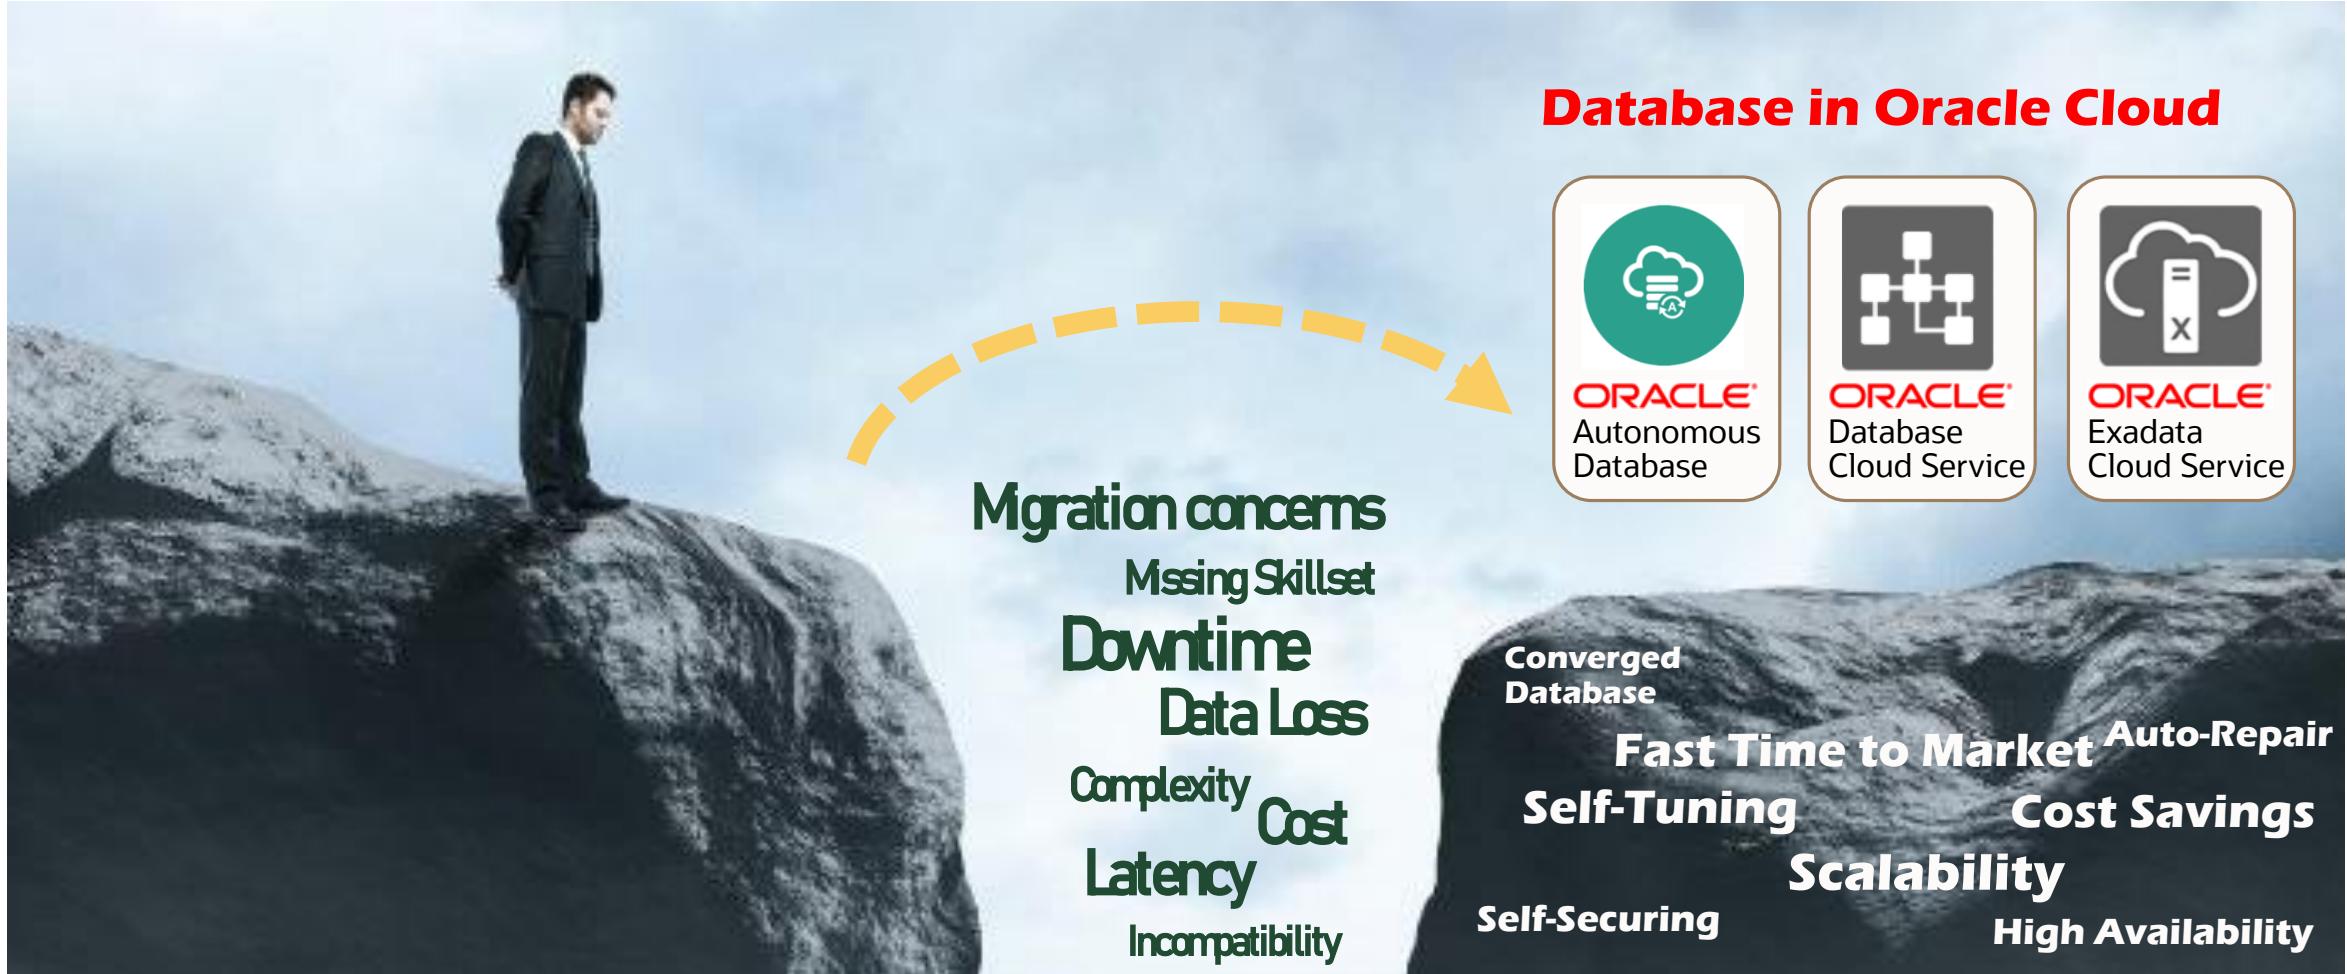

Alexandre Fagundes

Cloud Architect, Oracle Corporation

The future of databases is here in Oracle Cloud

But... how to best get there?

Different Migration Types

Offline Migration

- One-time copy of the database
- Requires applications to be offline during migration

Physical Migration

- Blockwise copy of database files
- Requires database vendors and versions be same on source and target
- No filtering or transformation
- Tools: RMAN, DataGuard

Direct Connection

- Source database can be accessed directly from target network
- Requires VPN/FastConnect for On-Prem

Online Migration

- Initial copy of database followed by change data capture during migration
- Applications can stay online during migration

Logical Migration

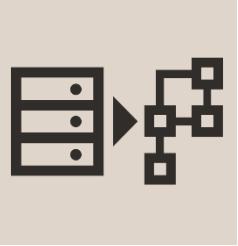

- Logically interpret database contents and copy to database in target format
- Source and target can be different
- Tools: Datapump, GoldenGate

Indirect Connection

- Source database cannot be accessed directly, behind firewall
- Requires migration tool with agent

Oracle Solutions to migrate databases to Oracle Cloud

OCI Database Migration (DMS)

- Fully managed
 - Graphical guidance
 - Online and offline migrations
 - Autonomous Database target
- Based on Zero Downtime Migration

Zero Downtime Migration (ZDM)

- User Managed Expert Tool
- Fleet Migrations
- Logical and Physical Migrations
- Migrations to ExaCC

SQL Developer

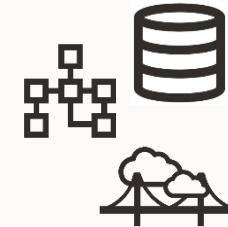

- Developer Experience
- Fine-grained transformations

Enterprise Manager

ORACLE
Enterprise Manager

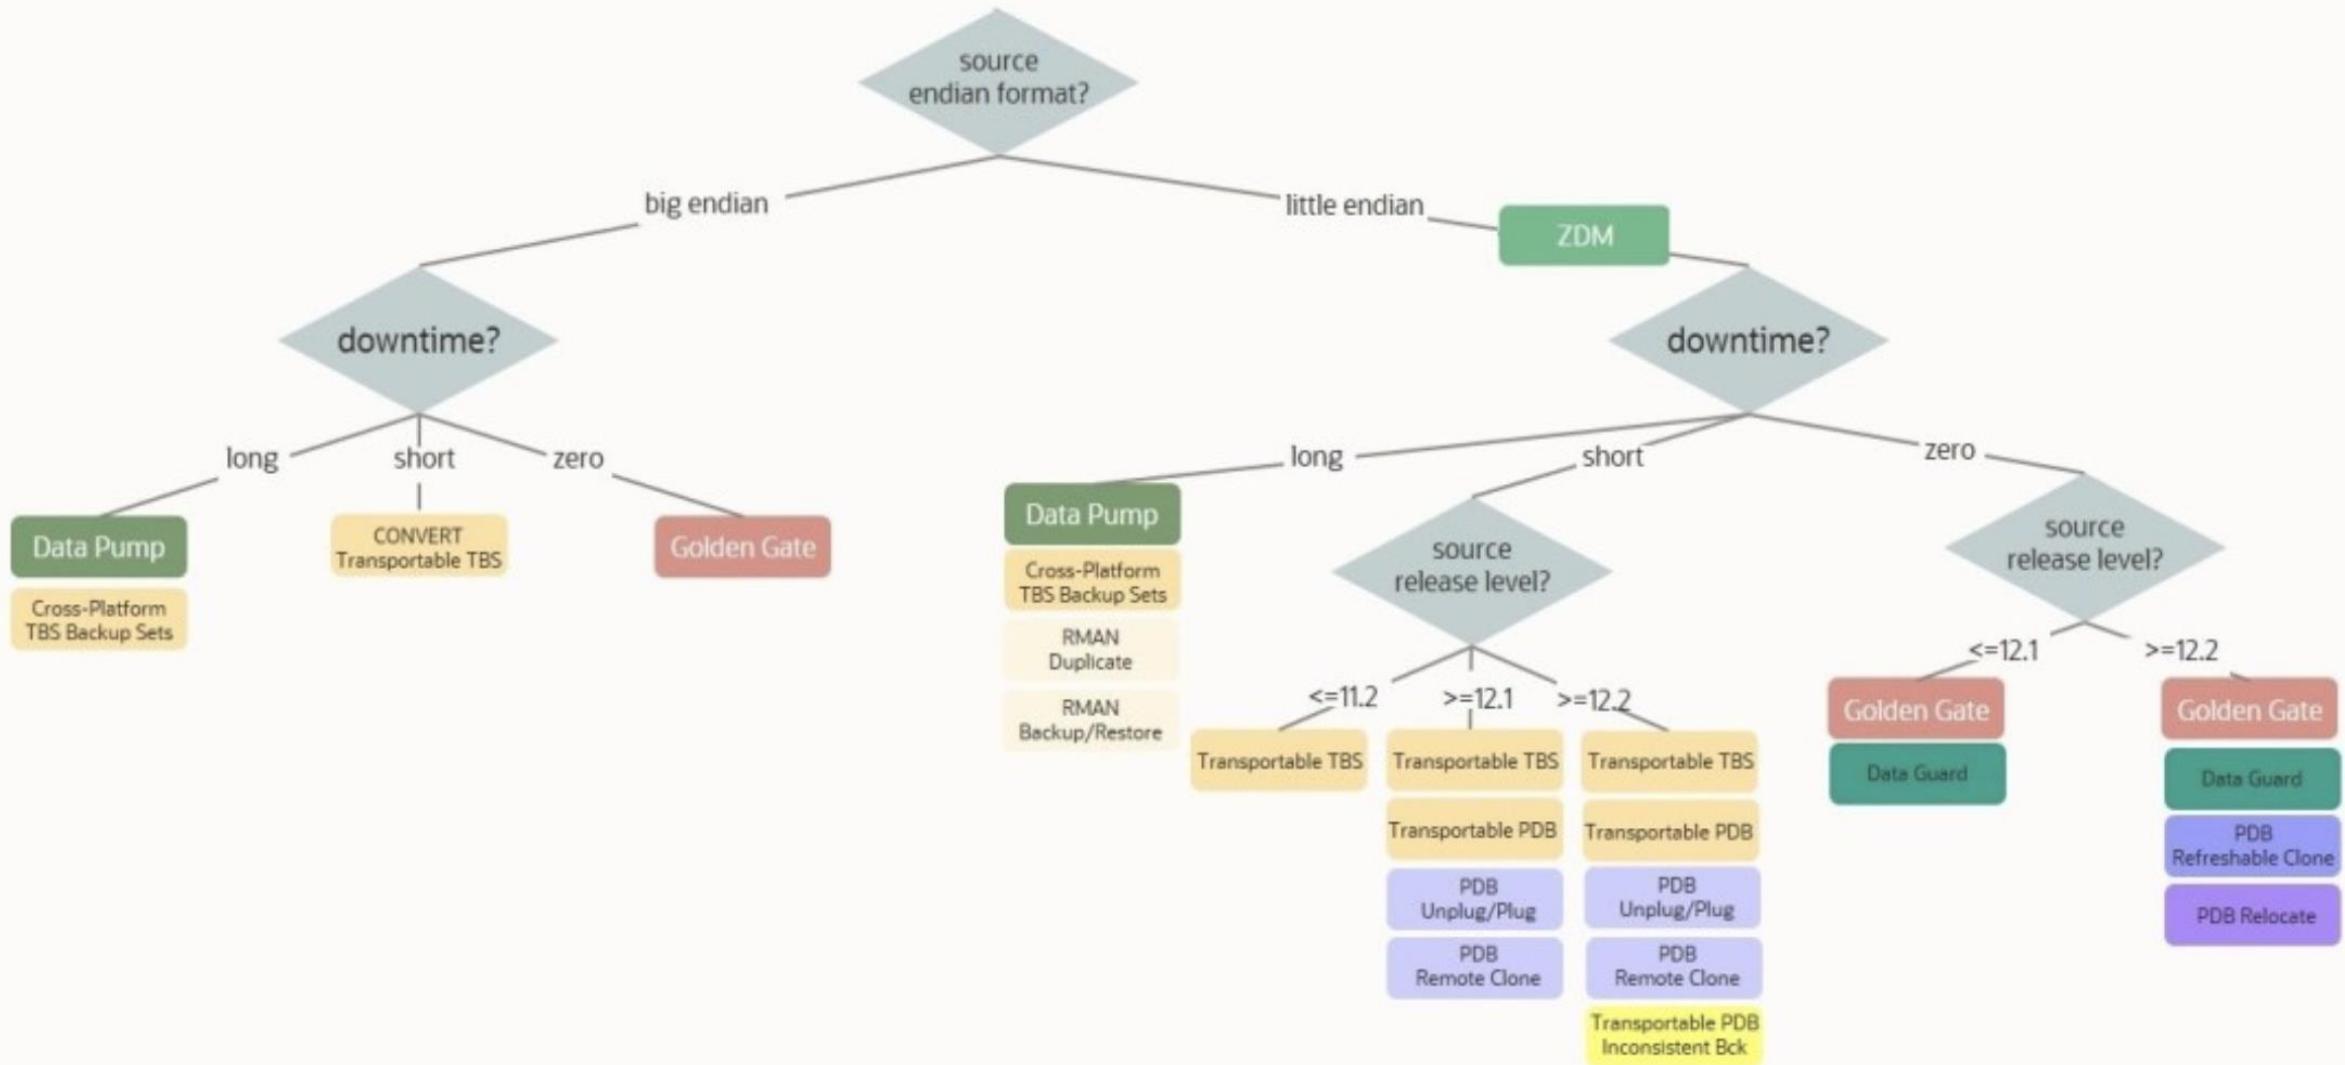

- Integrated with EM ecosystem
- Use as part of EM Automation and Monitoring

Database Tools

- Manual use of DB Tools (RMAN, Data Guard, Datapump, GoldenGate)
- Full expert control
- Special use cases (bi-directional replication, etc.)

Database Migration Decision Tree

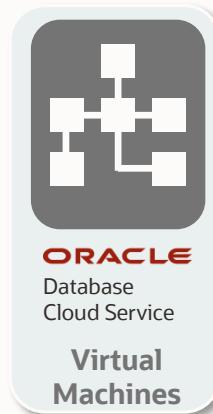

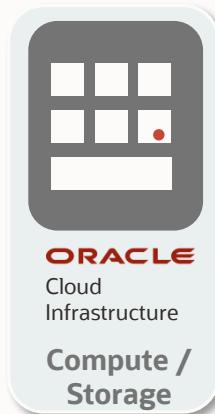

Migration requirements and constraints

What you should know before you design a migration strategy...

Source Database	Target Database	Runtime Constraints
<ul style="list-style-type: none">• Database version• Database size and number of database tables• Workload Type• Usage and performance requirements• Single/Multi-tenant Architecture• Endian format• Character set	<ul style="list-style-type: none">• Database Type• Database version• HA and DR requirements	<ul style="list-style-type: none">• Bandwidth and Connectivity• Fallback Capability• Down-time requirements for migration• Project resources available for migration

Oracle Cloud Database

Range of options

The Right Cloud Database for Every Use Case

Integrated Database HW/SW

Fully Autonomous Operation,
Dynamic Scalability

Plug/Unplug

Migration Methodology

Source databases:

- CDB Databases 18c, 19c
- Non-CDB or CDB Databases 12c
- Non-CDB Databases 11g (via Upgrade)

Target databases:

- DBaaS VM, DBaaS BM, ExaCS, ExaCC
- Versions: 12c, 18c, 19c

When to use

- ✓ Source DB is Little-endian
- ✓ Supports small to large databases
- ✓ Migrate from non-CDB to CDB
- ⚠ Requires knowledge of migration tools like RMAN and Data Pump
- ⚠ Requires some down-time
- ⚠ Upgrade before migrate for 11g and lower versions

Simple

Flexible
Architecture

Enterprise fleet-
scale migrations

Free

Recovery Manager (RMAN)

Reliable and Versatile offline migration tool

Source databases:

- CDB/PDB Databases 12c, 18c, 19c
- Non-CDB Databases 11g, 12c, 18c, 19c

Target databases:

- DBaaS VM, DBaaS BM, ExaCS, ExaCC
- Versions: 12c, 18c, 19c

When to use

- ✓ Cross-platform migration possible
 - ✓ Allows point-in time recovery
 - ✓ Migrate from non-CDB to CDB
 - ✓ Small to Large Database size
- ⚠ Requires knowledge of various RMAN methods
- ⚠ Requires some down-time

Point-in-Time
Recovery

scale migrations

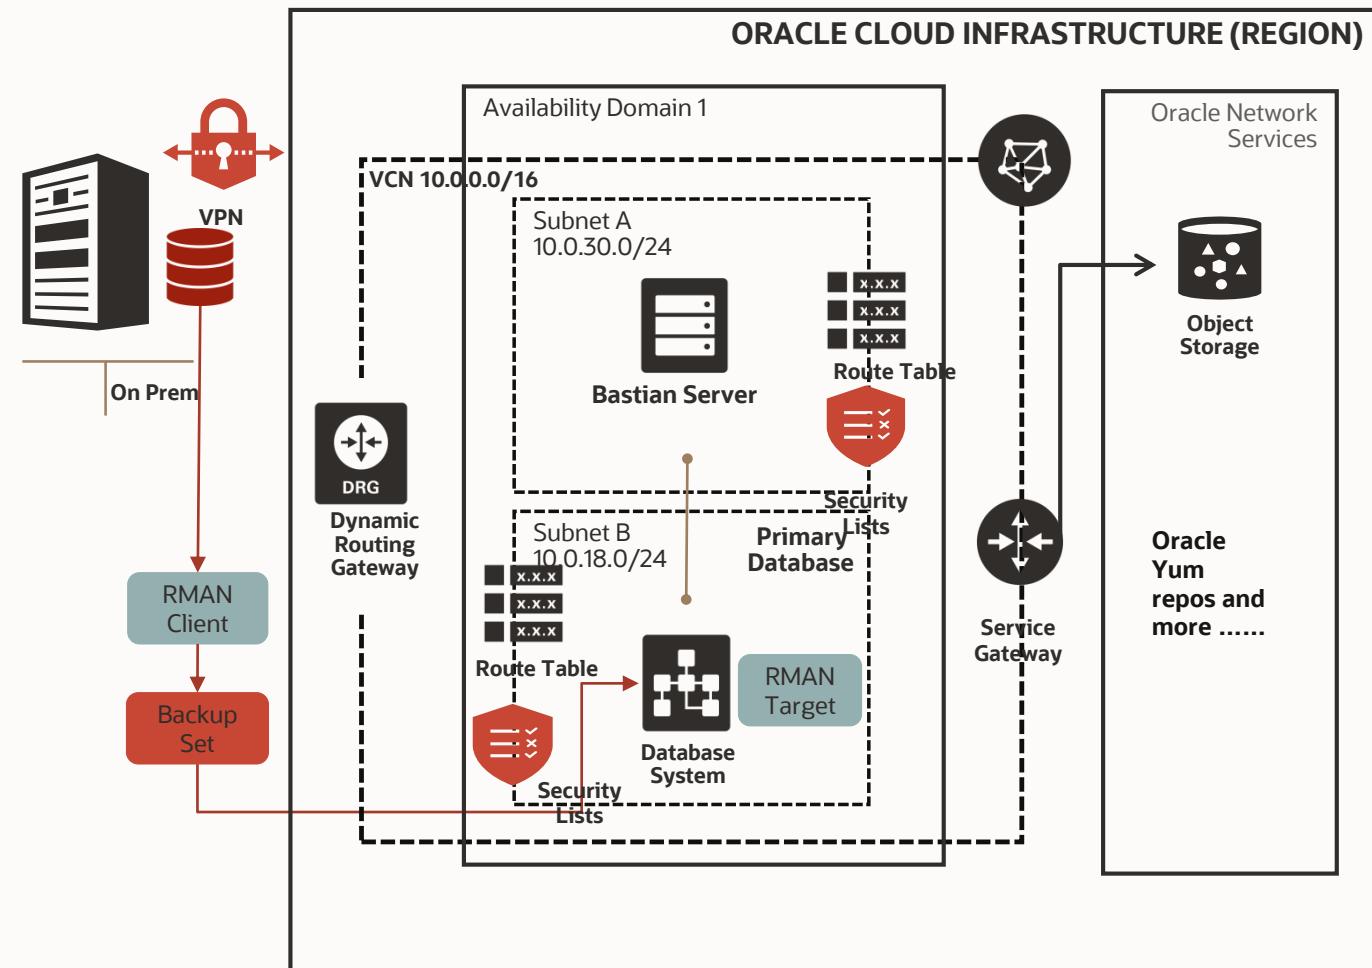

Free

RMAN Reference Architecture

Migration Steps

- On-premises Target Database – perform backup & recovery operations
- RMAN Client – command line interface to interpret and execute
- RMAN Methods
 - RMAN Cross-Platform Transportable PDB
 - RMAN Cross-Platform Transportable Tablespace Backup Sets
 - RMAN Transportable Tablespace with Data Pump
 - RMAN DUPLICATE from an Active Database
 - RMAN CONVERT Transportable Tablespace with Data Pump

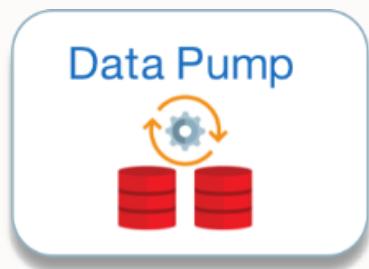

Data Pump

Fast, full offline database migration tool

Source databases:

- CDB/PDB Databases 12c, 18c, 19c
- Non-CDB Databases 11g, 12c, 18c, 19c

Target databases:

- DBaaS VM, DBaaS BM, ExaCS, ExaCC
- Versions: 12c, 18c, 19c

When to use

- ✓ Supports small to large databases
- ✓ Supports cross-endian and character-set
- ✓ In-flight Upgrade possible
- ✓ Changes to database structure possible
- ⚠ Requires knowledge of various methods
- ⚠ Requires some down-time

Data Pump

Features and Capabilities

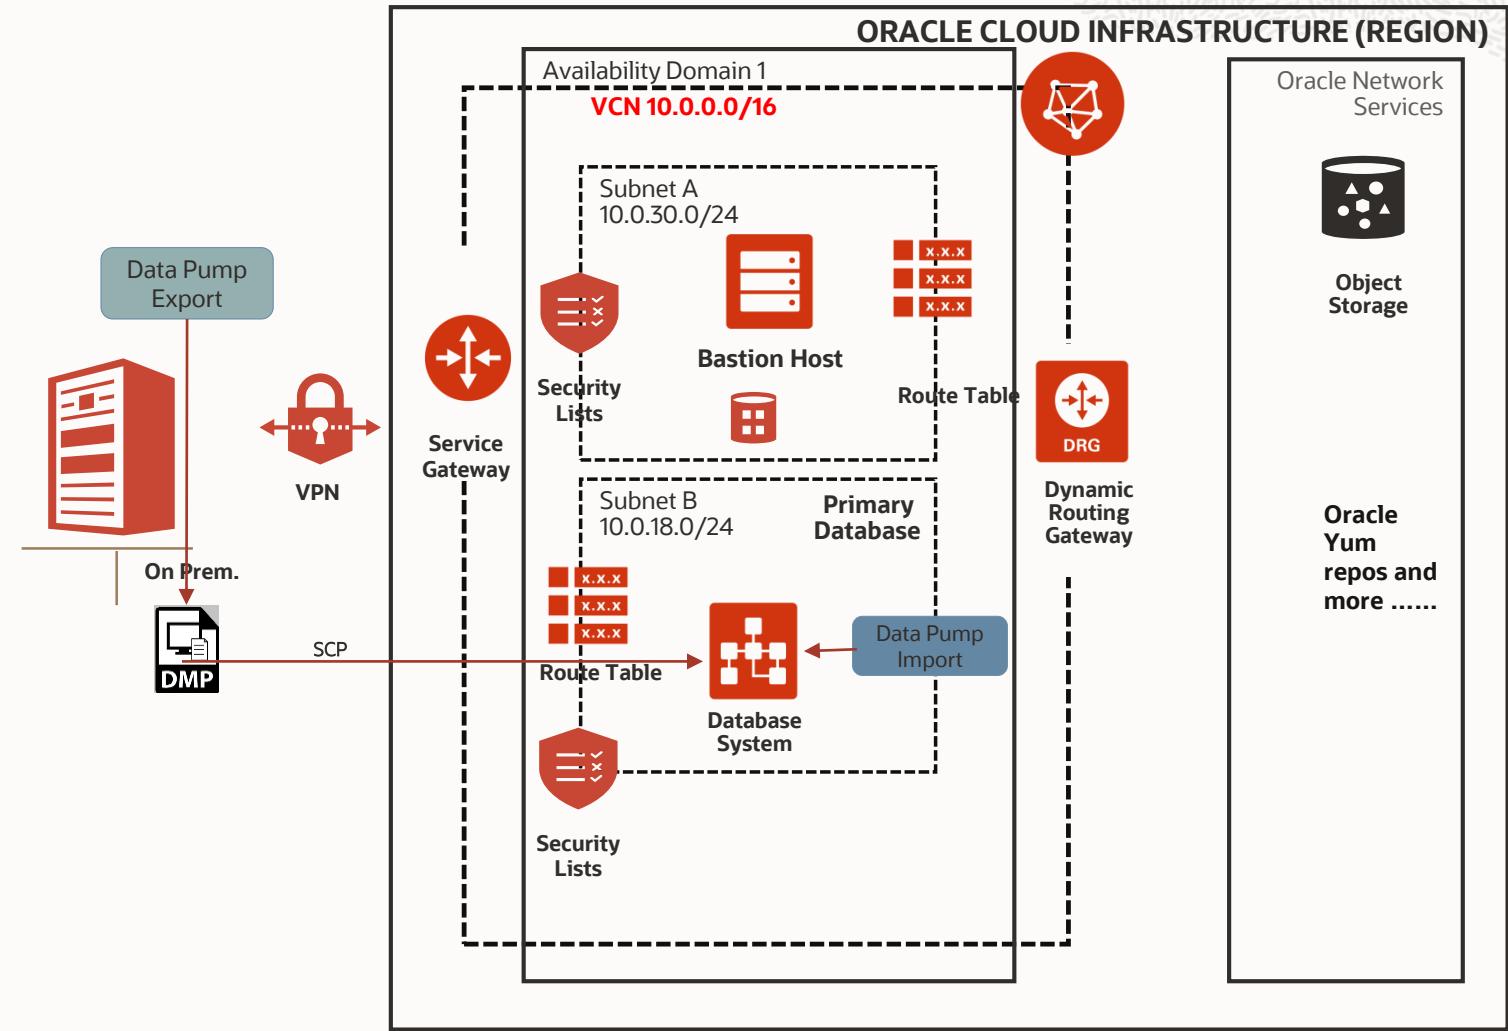

- Oracle Data Pump enables high-speed movement of data and metadata from one database to another
- Oracle Data Pump is available on Oracle Database 10g & later
- There are five different modes of data unloading
 - **Schema Mode** - default mode, specific schemas
 - **Table Mode** - specified set of tables dependent objects
 - **Tablespace Mode** - the tables in the specified tablespace
 - **Transportable Tablespace Mode** - only the metadata for the tables and dependent objects within a specified set of tablespaces
 - **Full Export Mode** - entire database

Use Case: Data Pump Migration Conventional Export/Import

Migration Steps

- Invoke Data Pump Export on-premises DB
- Secure copy the dump file to the OCI Database System
- On OCI DB System invoke Data Pump Import
- Validate the import

Data Guard

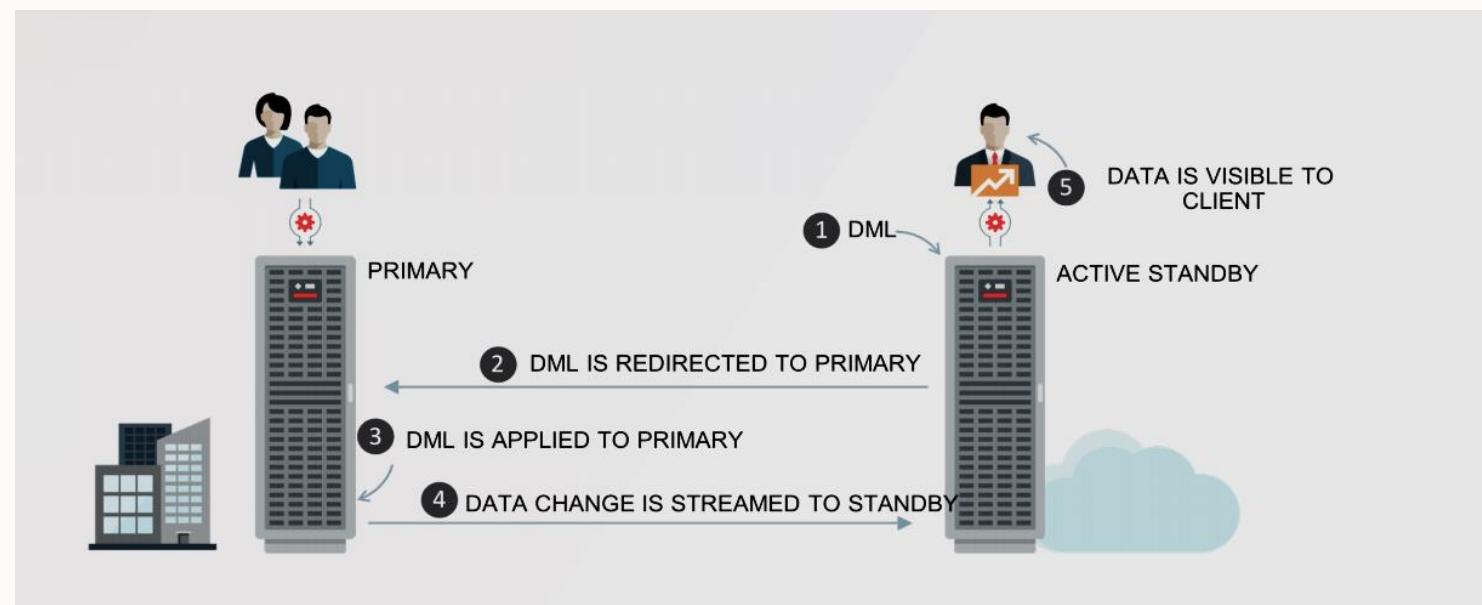

Real-time Data Protection & Availability

When to use

- ✓ Provides HA and DR solutions
- ✓ Minimal downtime migration
- ✓ Source version 11.2.0.4, 12.1.0.2, 12.2.0.1, 18, 19
- ✓ Only for Little Endian platforms
Only non-CDB to non-CDB or PDB to PDB
- ⚠ No structural changes
- ⚠ No upgrade to new version

Oracle Data Guard ensures high availability, data protection, and disaster recovery for enterprise data.

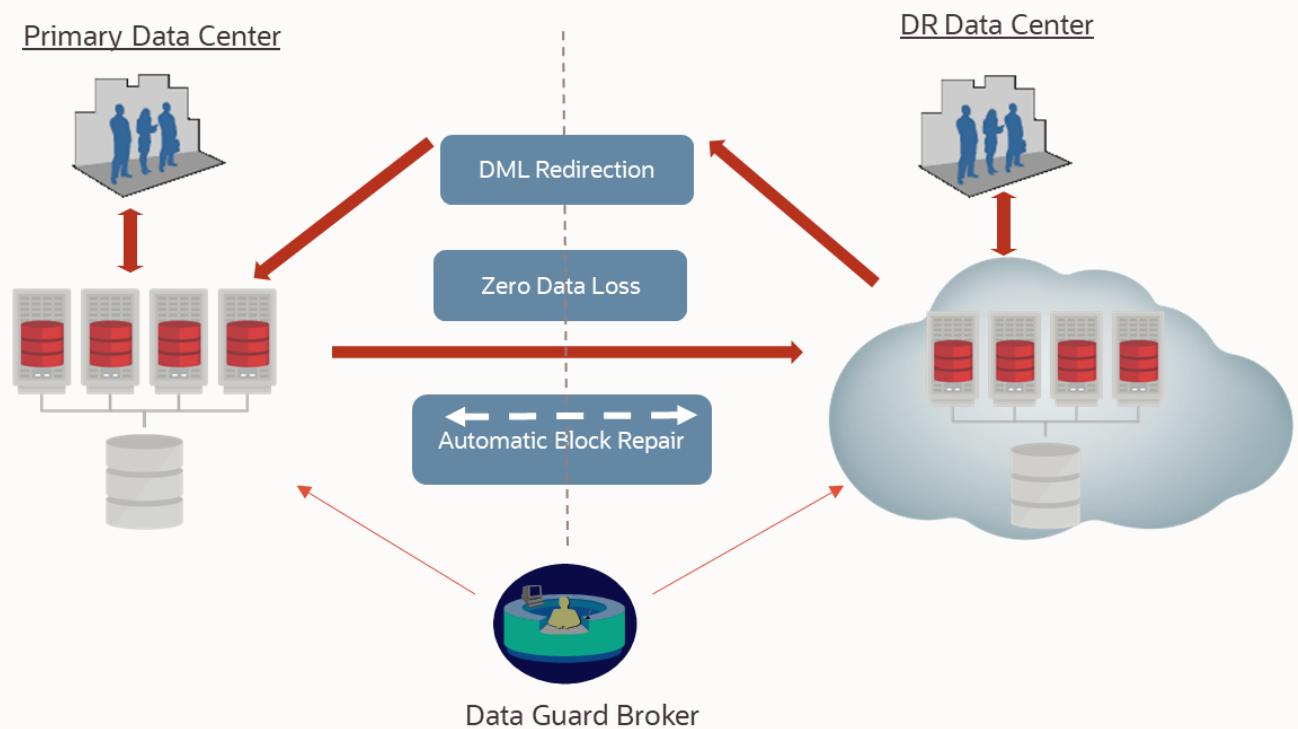

It provides a comprehensive set of services that create, maintain, manage, and monitor one or more standby databases.

Active Data Guard

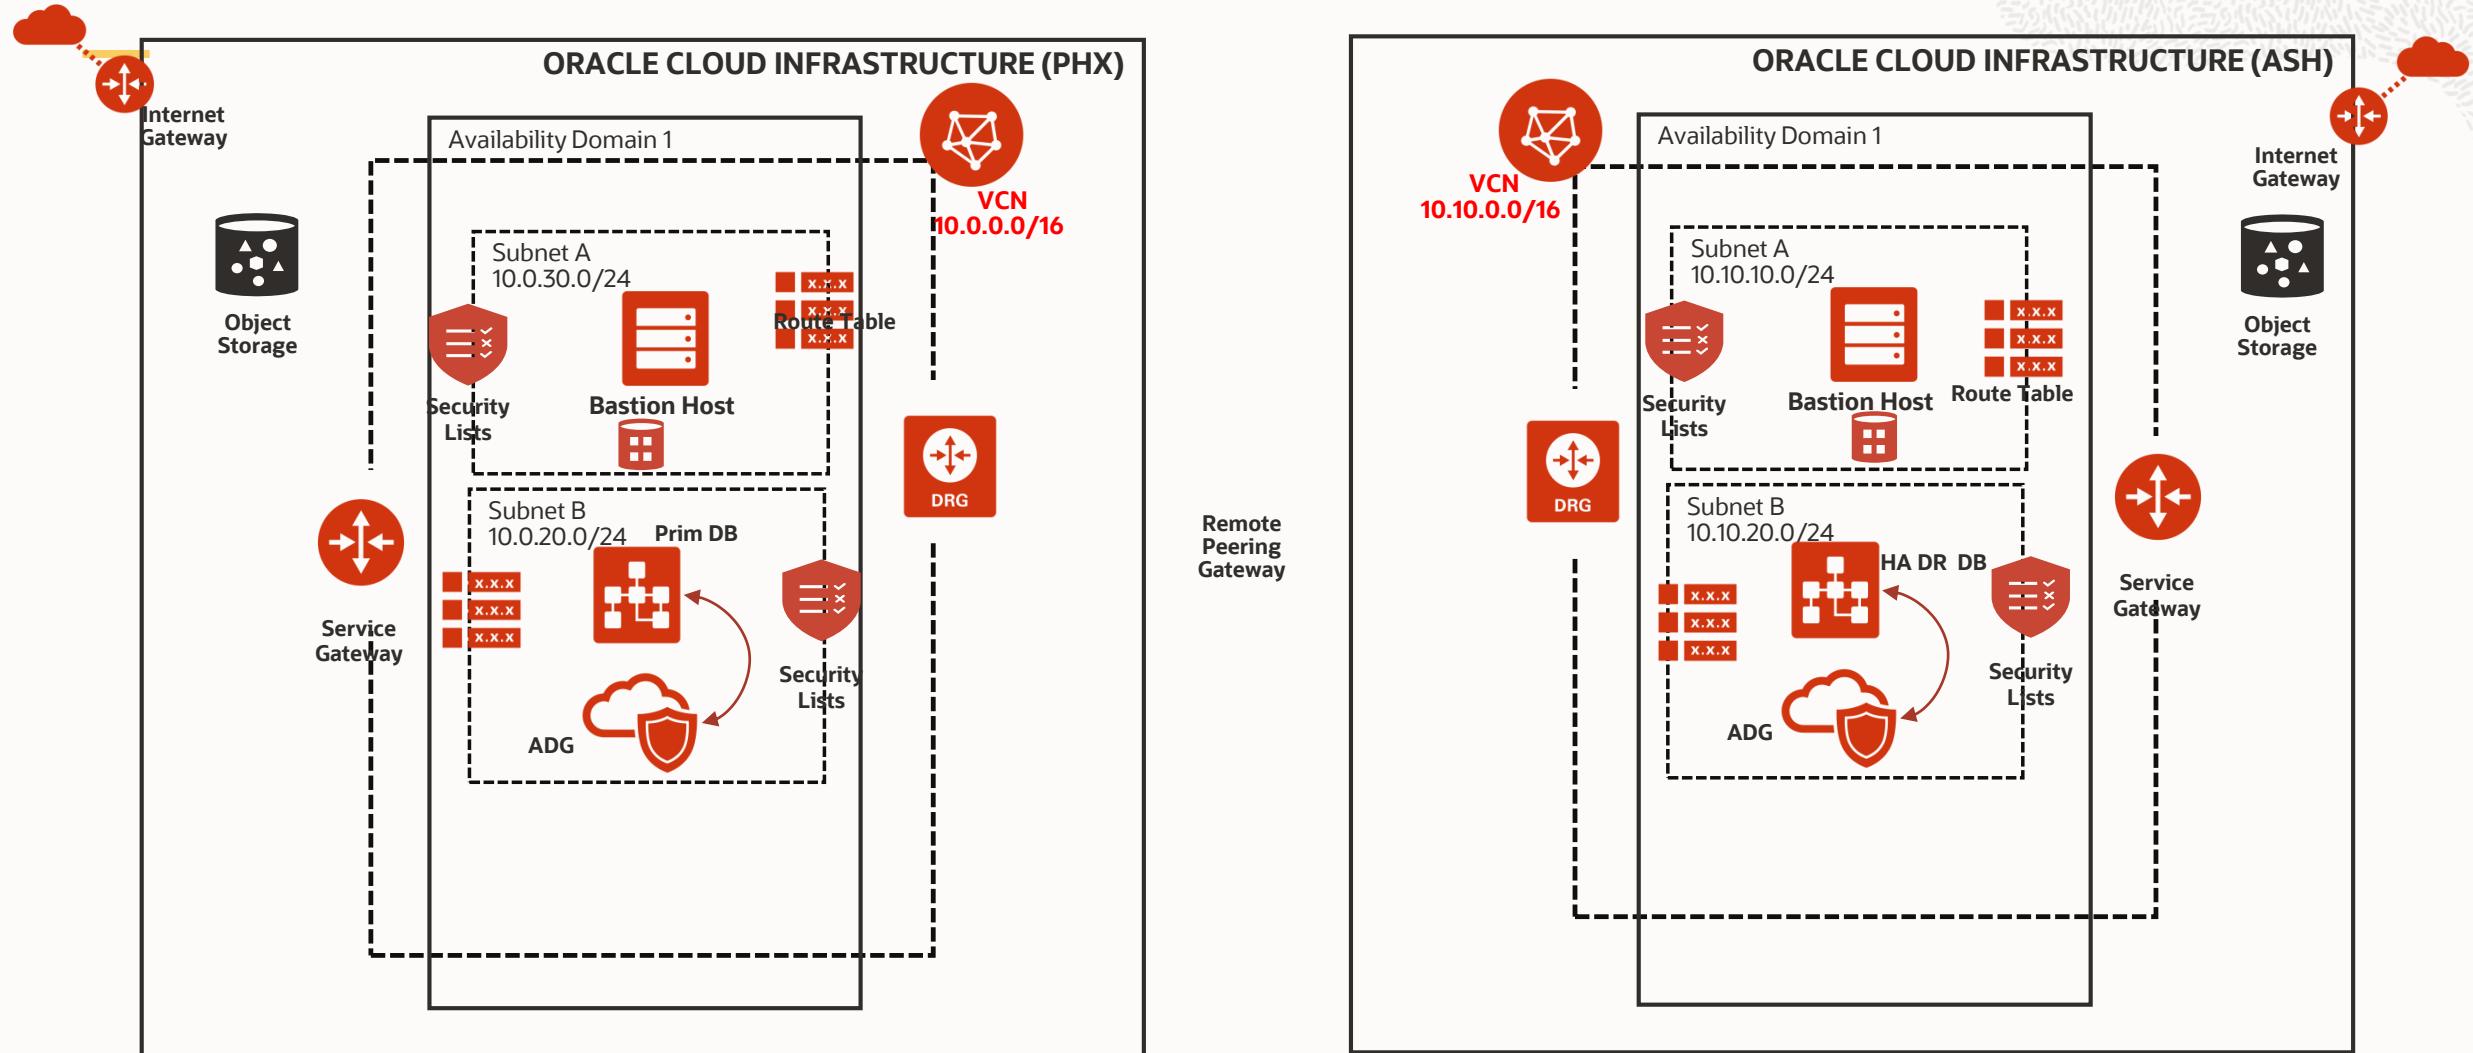

Oracle solution for Active Disaster Recovery

- Eliminates single point of failure
- Efficiently uses network bandwidth
- Provides unique levels of data protection
- Fast-Start failover to the standby
- Switchover to a standby
- Read Write mode on Standby.
- A True Sync between Primary and Secondary Instances.

Disaster Recovery Across Regions – Reference Architecture

Active Data Guard

Zero Downtime Migration (ZDM)

Simple migration tool for lift and shift use cases

Source databases:

- CDB/PDB Databases 12c, 18c, 19c
- Non-CDB Databases 11g, 12c, 18c, 19c

OCI Target database:

- DBaaS VM, DBaaS BM, ExaCS, ExaCC
- Versions: 11g, 12c, 18c, 19c

When to use

- ✓ Free, easy to use tool
- ✓ Small to Large Database sizes
- ✓ Lift and Shift like to like versions
- ✓ Requires no downtime
- ⚠ In-Flight upgrade not possible
- ⚠ Cross-endian/ Cross-platform not possible

Simple

Migration Process using Zero Downtime Migration Tool

Migration Steps

1. Network Configuration
2. Installing ZDM Tool
3. Setting up communication
4. Checking Encryption Wallet
5. Configuring ZDM Tool
6. Migration pre-check
7. Migrate the Database

Oracle Cloud Infrastructure – Database Migration

Fully managed, easy to use database migrations into Oracle Cloud

Database Migrations

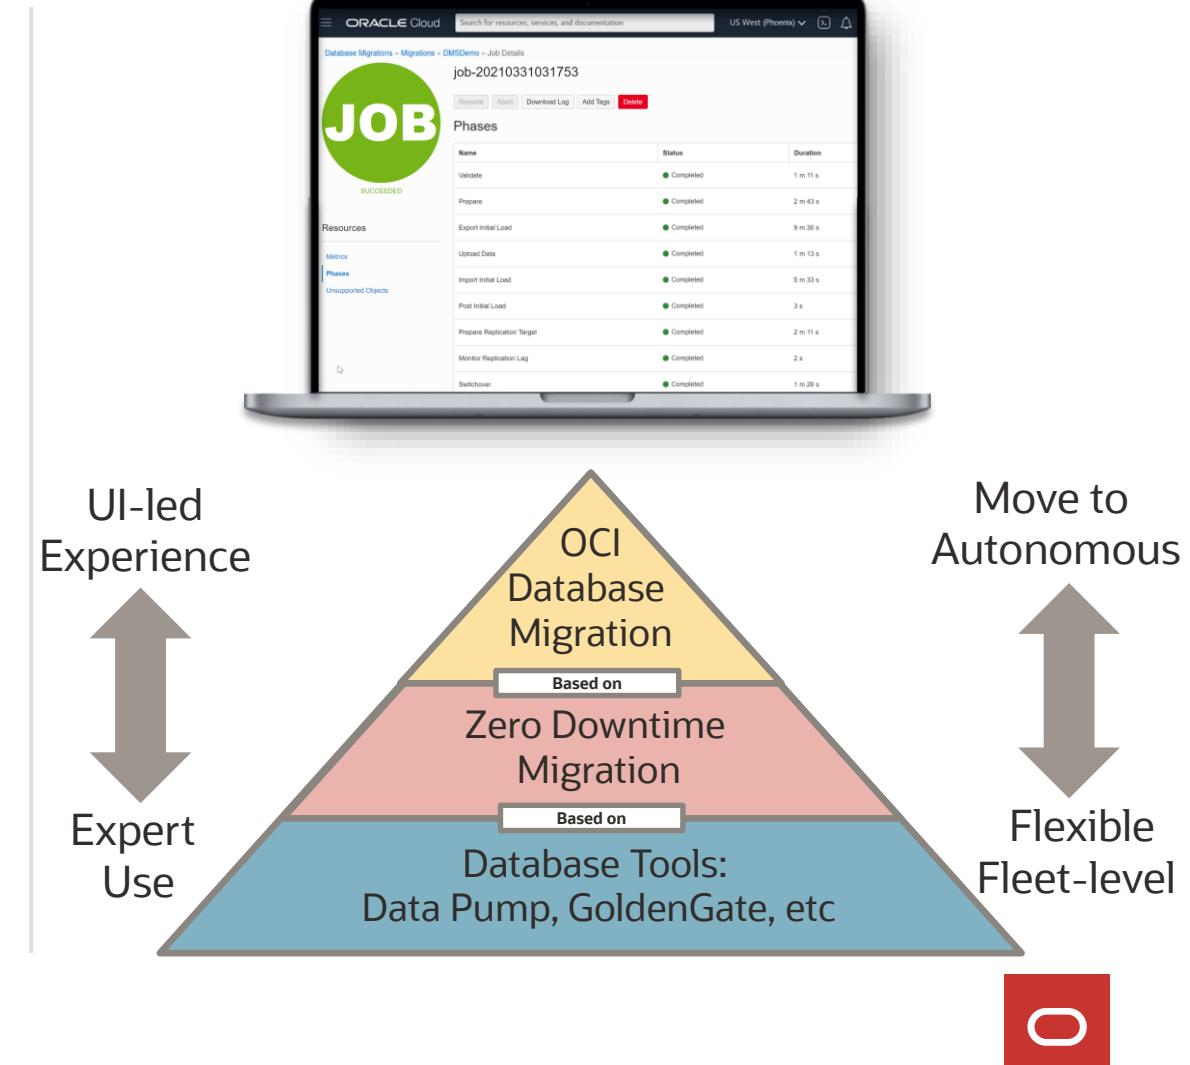

- Reduce cost and improve performance in Oracle Cloud
- Migrate databases, free for 6 months per migration

Core Use Cases

- Machine-assisted migrations for Oracle Databases, Data Marts and Data Warehouses into Oracle Cloud

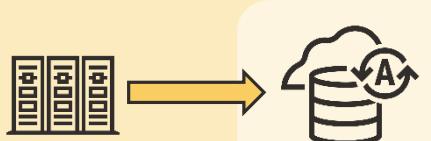

Differentiated Use Cases

- Simplifies underlying technologies and resources
- Logical Offline and Online Migrations
- Schema/Metadata Migration
- Based on enterprise-strength Oracle tools Zero Downtime Migration, GoldenGate, and Data Pump

Step 4: Validate Migration

Confirm all prerequisites, permissions, and connectivity to source and target

The screenshot shows the Oracle Cloud Migration Service (OCM) interface. On the left, there is a large green circle with 'DM' in white, labeled 'ACTIVE'. In the center, there is a yellow circle with 'JOB' in white, labeled 'IN PROGRESS'. The main area displays the 'MyMigration' page.

Migration Information:

- OCID: ...lgaxuq [Show](#) [Copy](#)
- Compartment: ggsstage (
- Created: Wed, Mar 31, 2021
- Encryption Vault: [DMS_Vault](#)
- Encryption Key: [DMS_Key](#)

Validation Status: Migration requires validation before it can be started. Select the Validate action button to initiate validation process.

Action Buttons: Validate (highlighted with a red box), Start, Clone, Move Resource, More Actions ▾

Job Details: Validation in progress at phase "Validate Target" (Phase 1 of 5).
job-20210331030633

Job Information: OCID: ...jdwsna [Show](#) [Copy](#), Type: Evaluation
Created: Wed, Mar 31, 2021, 03:06:33 UTC

Resources: Metrics, Phases (highlighted), Unsupported Objects

Phases:

Name	Status	Duration
Validate Target	Started	3 s
Validate Source	Pending	1 s

Step 5: Start Migration

Initiate the migration job to move database into the cloud

The screenshot shows the Oracle Database Migration Service (DM) interface. On the left, there's a large green circle labeled 'DM ACTIVE'. Below it, under 'Resources', there are tabs for 'Metrics' (selected), 'Jobs' (highlighted with a blue border), and 'Excluded Objects'. In the center, under 'Jobs', there's a table with one row:

Name	State
job-20210331031341	Succeeded

To the right of the table, there's a large orange circle labeled 'JOB IN PROGRESS'. Below it, under 'Resources', there's a table with two tabs: 'Metrics' (selected) and 'Phases'. The 'Metrics' tab shows a single row: 'Validate' with a status of 'Completed'. The 'Phases' tab shows two rows: 'Validate' (Completed, 1m 11s) and 'Prepare' (Started, 55s, 50% progress). At the top of the page, there's a message: 'Migration validation completed and can be started from the Start action button.' A red box highlights the 'Start' button in the top navigation bar.
